

Social Determinants of Health Improvements with Home Infusion of IVIG Therapy

This study aimed to conduct a comprehensive analysis of patient perception regarding the benefits and challenges of home infusion therapy, specifically IVIg and non-IVIg therapies.

83%

of respondents said they felt very sure about their home's safety, compared to 26.4% for hospitals.

86%

of respondents stated that home infusion saved them money and time. 74% found it helped balance their work schedule.

82%

of respondents reported mood improvement, indicating a positive mental health impact for home infusion vs non-home infusion.

**RECOGNIZED AS THE 2025 OUTSTANDING ABSTRACT ACHIEVEMENT AWARD WINNER
BY THE NATIONAL HOME INFUSION FOUNDATION (NHIF)**

SOURCE: Blinded data was collected from a survey of 265 CSI patients receiving home infusion therapy for conditions including CIDP (Chronic Inflammatory Demyelinating Polyneuropathy), MG (Myasthenia Gravis), various antibody deficiencies and other conditions. Statistical analysis was conducted to summarize key findings and differences by disease.
